

# Kubernetes on-premise installation process

Cybersecurity with  
an attacker's mind  
and a defender's  
brain

# Agenda

- Script-overview
- Practical-demo
- doubts

## Script Overview:

### **Script having – 5 files**

- Master-prerequisite.sh
- Worker-prerequisite.sh
- Dynamic-allrounder.sh
- Master-removal.sh
- Woker-installation.sh
- Worker-removal.sh

### **Installation method**

- firstly we need to run Worker-prerequisite.sh on both worker nodes
- Secondly run the Master-prerequisite.sh
- Thirdly we need to copy 4 remains files (Dynamic-allrounder.sh ,Master-removal.sh, Woker-installation.sh and Worker-removal.sh )
- And give all files execute permission
